

The Callus Tonic, replaces the blade and the file in the salon. It is a keratolytic alkaline solution that softens the protein bonds, making it easier for dead skin cells to be removed from the heels. The Callus Removal Tonic works only on the outer layer of the heel and softens the cornea stratum. It is the ideal product to apply to very dry and cracked heels. Minimizes labor in the salon.

WHAT MAKES ME DIFFERENT?

The Callus Removal Tonic is an alkaline peel and not an acid peel, which makes it more effective to remove the dead, hard skin under the feet. It has a very high alkalinity and must be used with a PH Neutralizer. The allowed active is at the maximum allowed percentage making it very effective, treating heels in 10 minutes.

HOW DO YOU APPLY ME?

Spread a thin layer of cotton wool on the heel. Apply Tonic to the heel. Ensure that the cotton wool is thoroughly soaked. Leave for 10 minutes. Remove the cotton wool, scrape dry skin off. Use the pumice to remove excess skin. Neutralize with Elim Neutralizer.

WHAT ARE MY ACTIVES AND BENEFITS?

- **Sodium Hydroxide** acts as the Alkaline in the Solution to increase the skins PH and soften dead skin cells.
- **Propylene Glycol** is used as a humectant to hydrate the feet and prevent it from drying out
- **Glycerin** is non-toxic in nature, and was added as a hydration agent. It also alleviates symptoms such as flaking of the heel after application.

NEW IDEAS

- Roll an orangestick in cotton and dip on the Callus Removal Tonic. Scrape under thickened toenails to remove excess keratin. Avoid areas of the skin.
- Petroleum jelly can be used to cover areas that must avoid contact with the tonic e.g. bleeding cracks, minor wounds etc.

Callus Removal Tonic
